Education

SVKM's Dwarkadas J. Sanghvi College of Engineering, Mumbai 2024 – 2028
B.Tech, Computer Science & Engineering (Data Science) CGPA: 9.25

K J Somaiya Junior College of Science & Commerce, Mumbai 2022 – 2024
HSC Percentage: 88.67%

Achievements

- **1st Runner-up**, D3COY 1.0 Hackathon (MIRAGE), DJS ISACA, DJ Sanghvi College, Mumbai
- **1st Runner-up**, Kurukshetra 2.0 Hackfest (AI/ML & Agentic AI), MIT ACSC, Pune
- **Finalist**, DEXIT Hackathon & MUSA Codex Hack

Technical Skills

- **Programming & Backend:** Python, JavaScript, SQL, React.js, Node.js, FastAPI, REST APIs
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Git
- **AI & Machine Learning:** Machine Learning, Deep Learning, NLP, Transformers, LangChain, LangGraph, RAG
- **Cybersecurity:** MITRE ATT&CK, Honeypots (Cowrie, OpenCanary), Threat Detection, Risk Scoring
- **Databases & Data Analysis:** MySQL, SQLite, SQLAlchemy, Pandas, NumPy

Projects

University Timetable Optimization using Adaptive CP-SAT (NEP 2020) [GitHub]
Python • Google OR-Tools CP-SAT • Constraint Optimization

- Modeled NEP 2020 scheduling (electives, honours, lab splits) with 21 hard and 9 soft constraints across 3 divisions and 6 lab batches.
- Adaptive weighting cut soft-constraint penalty by 88.2% with zero hard violations; full timetable in 60–120 s.

MIRAGE: Deception-Driven Threat Detection & Response (Hackathon Winning Project) [GitHub]
Python • FastAPI • MITRE ATT&CK • SHA-256 • Risk Scoring • Docker

- Built a SOC platform with an adaptive gateway (reverse proxy + WAF) that scores visitor risk and diverts hostile sessions mid-session from the real app to an isolated decoy (Cowrie, OpenCanary on GCP).
- Function-centric profiling: weighted scoring of critical endpoints (login, 2FA, payment, admin) within a time window separates targeted attackers from bot noise; risk shown on a real-time solar-system dashboard.

MedVault: Containerized Healthcare Platform on GKE [GitHub]
Docker • Kubernetes • GCP • FastAPI • React

- Containerized FastAPI + React app with multi-stage builds (∼27 MB frontend image); built via Cloud Build and Artifact Registry.
- Deployed on GKE Autopilot with 2 replicas per service, path-based Ingress, and health probes; failed pods self-healed in ∼25 s.

Emotion Classification — BERT vs. Bi-GRU [Fine-tuned] [From-scratch]
Python • Machine Learning • Deep Learning • Text Processing • Data Analysis

- Fine-tuned BERT and trained a Bi-GRU from scratch on a 28-class emotion task with 50,000+ samples.
- Benchmarked both models on identical data for accuracy and training efficiency.

Alert Fatigue Buster: Intelligent Alert Management [GitHub]
React • FastAPI • WebSockets

- Ingests Prometheus, Datadog, and webhook alerts; reduced alert noise by 90–99% via deduplication and correlation.
- Severity scoring with adaptive cooldown and real-time WebSocket dashboard; 7 pytest scenarios passing.

Certifications

- **AWS Academy Graduate: Cloud Architecting** (60 hours), Oct 2026 [Credential]
